

# Occupational Health Specialisation

The Occupational and Environmental Health specialisation is the only recognised specialisation offered within the MPH programme.

In addition to the core competencies described for the MPH course, students in this specialisation will be able to:

- (1) Identify the factors at the workplace and the environment that could impact health or contribute to ill health;
- (2) Recommend appropriate preventive and remedial actions for workplace and possible environment hazards;
- (3) Develop expertise in the prevention, evaluation, diagnosis and management of conditions that are experienced by workers or individuals exposed to hazardous environmental agents (for medical candidates); and
- (4) Understand issues surrounding environment science, laws, management and assessment (for participants doing cross-faculty modules).

# Occupational Health Specialisation

Students will complete 20MC of prescribed modules. In addition, medically qualified students will complete SPH5305 Clinical Occupational Medicine which is required for occupational medicine clinical practice.

MEDICALLY QUALIFIED	NON-MEDICALLY QUALIFIED
